MEDIUM RISK

CRITICAL 0    HIGH 0    MEDIUM 2    LOW 4    PASSED 7

PLAIN-ENGLISH SUMMARY

These checks surfaced 6 items worth reviewing across metadata, hygiene files, dependencies, and risk indicators. Nothing here indicates active malice; the findings are mostly hygiene and reproducibility gaps. This report covers only what these checks can see on the default branch.

SCORE BREAKDOWN

100 - PENALTIES

|                         |    |
|-------------------------|----|

| DEFAULT BRANCH      | main                                                                                                           | LICENSE          | None detected  |
| FILES IN TREE       | 134                                                                                                            |                  |                |

| FINDINGS |                                                                                                                                                                                                                                                                    | 6 ITEMS |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| F-02     | <div><div>No license detected</div><div>METADATA</div><div>GitHub reports no license for this repository. Without one, reuse rights are legally unclear.</div><div>FIX Add a LICENSE file so users know their rights.</div></div>                                  | MEDIUM  |
| F-05     | <div><div>Missing LICENSE</div><div>HYGIENE</div><div>No license means all rights reserved by default. Users legally cannot reuse, modify, or distribute the code.</div><div>FIX Add a LICENSE file (MIT, Apache-2.0, and GPL-3.0 are common choices).</div></div> | MEDIUM  |

report vulnerabilities privately.

**FIX** Add SECURITY.md with a contact route for vulnerability reports.

F-07

**Missing CONTRIBUTING guide** HYGIENE

LOW

Contributors have no documented process for proposing changes.

**FIX** Add CONTRIBUTING.md describing how to file issues and open pull requests.

F-08

**Missing Code of conduct** HYGIENE

LOW

Community standards are undefined, which can deter contributors.

**FIX** Add CODE\_OF\_CONDUCT.md (the Contributor Covenant is a common base).

F-09

**Missing Dependabot config** HYGIENE

LOW

Dependencies will not receive automated update PRs, so known-vulnerable versions linger.

**FIX** Add .github/dependabot.yml to enable automated dependency updates.

| PASSED CHECKS                  |                      | 7 ITEMS |
|--------------------------------|----------------------|---------|
| Description present            | Recently active      |         |
| README present                 | CI workflows present |         |
| Dependency manifests found     | Lockfile committed   |         |
| No committed .env or key files |                      |         |

| SCAN LIMITATIONS | READ BEFORE TRUSTING THE SCORE |
|------------------|--------------------------------|
|------------------|--------------------------------|

Scanned. A secret removed from the latest commit may still exist in history.

- L-02 Checks cover repository metadata, hygiene files, dependency manifests, and common risk-indicator filenames. The code itself is not reviewed, executed, or audited.
- L-03 Dependencies are detected, not vulnerability-scanned. A committed lockfile says nothing about whether the pinned versions have known CVEs.
- L-04 Secret detection is pattern-based on a handful of small committed files; it cannot find every credential and never inspects files over 20 KB.
- L-05 A high score means these checks found little — it is not a statement that the project is trustworthy, maintained, or free of malicious code.

READ-ONLY SCAN VIA THE GITHUB API. NOTHING WAS CLONED, INSTALLED, OR EXECUTED.  
SECRETS, IF DETECTED, ARE ALWAYS MASKED.
